

### **2.5.3. Prevention of Soil Pollution**

preventing the removal of soil contamination and principles are:

- prevention of soil contamination at source is essential.
- All kinds of waste and residues to cause damage to the soil, Environmental Law and contrary to the standards and methods specified in the relevant legislation to give direct and indirect soil, are prohibited in activities such as storing.
- mixed with clean soil contaminated soil.
- Where hazardous materials are used, stored, produced or the activities that produce waste facilities, disposal or return of gains made in the plant to prevent the contamination of soil, taking into account the likelihood of an accident measures are taken.

8.6 in the context of environmental legislation. In the Official Gazette No. 27605 of 2010 and "Regulation on Soil Pollution Control and Contaminated Sites Point Source" is published 31.05.2005 and numbered 25831 Soil Pollution Control Regulation is repealed.
