

### 2.3.2.2. Sharpening types

The sharpening of the vertical knife scissors is provided by the sharpening stone on the machine.

- **Stone sharpening:** One large and two small sharpening stones are used to sharpen the mouth of the blade from both sides.
- **Emery whet:** It is an endless sanding strip. Knife sharpens one on the left and one on the right.

**NOTE:** Emery whet process results in a better result than sharpening with a stone sander.
