

2.2.2 Round Cutters:

The round cutter consists of a round and movable blade placed with an end of a plastic handle. Also known as craft knife. Especially used for cutting leather, slippery fabrics and several layers of fabrics on top of each other. It provides a faster cut than the scissors. Suitable for short straight lines and sharp curves. The blade of the round cutter may damage the table surface. To prevent this, a plastic pad or a tray must be placed under the fabric.
