

#### **3.1.6.4 Color and Originality**

Color properties are classified as color harmony and color specificities. In color harmony; The color of the sewing threads must be compatible with the fabric or the same color. The produced product must react in accordance with the color of the sewing thread during the use of friction and light. The yarn must be selected so that it does not lose its color during its lifetime. The most important issue in sewing yarns is color fading.
