

1.2.2 Making Check of Miter and Legs Irregularity

The most frightened case in the view is asymmetric at a furniture is built-up. Don't keep all of the legs on the ground means that is unbalanced view, hobbling the legs, turning to dust of manpower and making work.

It's important that checking the miter and legs irregularity of the wooden structure which is made tetralogy. Finally, it is needed to prevent to asymmetrical legs and distortion of miter on the furniture. It should be made that the mounted wooden structure checking of the measurement, ordering irregularity carefullay. The checking of the measurement and irregularity is made in the way of be explained in matrixing.

The checking the irregularity of tetralogy is made on the straight floor. It's checked carefully that keeping all the legs on the ground exactly.
