1.2. Purpose and Importance of Occupational Health and Safety

Depending on the increase in the industrialization of our country and the world of work accidents and occupational disease rate seen in the work place it can be seen. Therefore, employees are healthier and ensure their work in a safe environment, to protect their physical and mental health should be taken of occupational health and safety measures. The interdisciplinary interaction in this understanding and makes the necessary cooperation, medicine, law, physics, developed with the support of positive occupational health and safety areas such as psychology and social sciences has emerged. When faced by employees during the job done from a technical viewpoint

elimination or reduction of focus in the middle of the hazards

In terms of creating health sciences protection from injuries resulting from occupational diseases and accidents at work and therapeutic dimension comes to the fore.

The main objective of occupational health and safety are:

- To eliminate risk in the workplace or to minimize losses,

- The health of employees physical, mental and protect and improve medical terms,

- Protect employees from the negative effects of working conditions,

- The resulting damage to their health, to detect occupational diseases and provide treatment,

- occupational accident or occupational disease suffered damage as a result of employees who work allow them to appropriate jobs,

- the degree of damage caused by objective, scientific and ethical way to identify and evaluate,

- To eliminate the tangible and intangible losses.
