

▪ **Physical Risks**

Working ambient temperature, humidity, lighting, noise, vibration, pressure has significant influence on such characteristics of an individual's health. Employees in particularly dangerous and very dangerous jobs are at risk greater than that direction. Here is the source of physical destruction negativity that may be important in every business and employees are protected against them.

Physical risk factors;

- Lighting
 - Vibration,
 - Powder,

 - Noise,
- ❖ It can be listed as the thermal comfort conditions.

In addition to the specific measures described in each section to remove or reduce the adverse effects of physical risk factors it should be applied in the following general measures below.

- It should be given priority to collective protection without departing about personal protection.

- Each and even if the necessary measures, it should ensure the use of appropriate personal protective equipment.
- Giving employees the necessary occupational health and safety training and periodic health examinations must be done.
- covering the overall workplace health and safety risk assessment should be made of.
