

2.5.4. Prevention of Noise Pollution

Noise pollution measures should be taken to include:

- Air areas, the establishment of settlements in remote areas of industrial and commercial zones
- prevention of unnecessary honking of motor vehicles
- the prohibition of such activities are allowed in residential areas and in places open to the public to prevent the sound level will be electronically amplified musical instruments or disturb the environment of residential areas
- To minimize the noise level of the employees will be exposed in the workplace (Ministry of Labor and Social Security "Noise Regulations" are considered.)
- providing sound insulation in buildings to be newly built in to prevent noise nuisance and the building of settlements in
- radio in the settlements and housing, and television will not be upgraded to the level of uncomfortable sound of musical instruments
- To reduce the noise in the transit traffic to be expanded instead of using individual vehicle (This will also contribute to the reduction of air pollution.)
- Sound insulation in motor vehicles to be provided, especially in small engine muffler bicycle type vehicle may be used.
- disturbance caused by noise and can be taken for the prevention of health-related harm, there are certain measures. These measures would be said in case of exceeding the value of the specified table in the Regulation.
- Technically, a number of measures related to construction related and workplace protection is concerned.

In fact, the noise element of urban planning, industrial layout in the choice of location should also be considered.

As with all environmental pollution factors in the most appropriate solution is to prevent noise source, but this may not always be economically and technically possible. technical and organized measures can be implemented to reduce noise are listed below.

According to your business situation and the framework conditions applicable to one or some combination of these.

- reducing the negative environmental impact of their work to combat noise and the noise level can be prevented by joint efforts of public institutions and civil society organizations.
- Increasing the distance between the housing and roads to

reduce traffic noise and making the greening work should be the first priority. Very intense on the road (motorway, the ring road) and efforts made to create visual pollution screening should be provided.
